	John Cooney	1796				
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1796

Specification

The use of the trademarks identifying the trimerization catalysts of applicants' invention have been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants' claims are unclear because the supporting disclosure only provides trademarks/tradenames in describing trimerization catalysts of their invention.

Art Unit: 1796

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/05289 in view of Rotermund et al.(6,284,812).

WO-'289 discloses preparation of rigid polyurethane foams prepared from toluene diamine initiated alkylene oxide based polyols having OH numbers meeting those as claimed, water, catalyst in amounts and inclusive of those as claimed, silicone surfactant, polyfluoroalkanes, cyclopentane and polyisocyanates in amounts within or in overlap with the ranges of values of the claims(see abstract, pages 2-12, and examples, as well as, the entire document).

WO-'289 differs from applicants' claims in that it does not particularly require the blends of sucrose and glycerin as defined by the claims. However, Rotermund et al. discloses sucrose and glycerine to be well known multifunctional polyols used in the action of providing crosslinking in rigid foam formation(see column 4 lines 24-31, as well as, the entire document). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the sucrose and glycerine crosslinkers disclosed by Rotermund et al. as crosslinkers used in the preparations of WO-'289 for the purpose of imparting their rigidizing crosslinking effect to products formed in order to

arrive at the products of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

As to the amounts of the respective components employed in the preparations of the instant concern. It has long been held that where the general conditions of the claims are disclosed in the prior art, discovering the optimal or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233; *In re Reese* 129 USPQ 402. Further, a prima facie case of obviousness has been held to exist where the proportions of a reference are close enough to those of the claims to lead to an expectation of the same properties. *Titanium Metals v Banner* 227 USPQ 773. (see also MPEP 2144.05 I) Similarly, it has been held that discovering the optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272,205 USPQ 215 (CCPA 1980).

Although WO-'289's teaching is seen to be sufficient in its disclosure of the foaming and gelling catalysts (see page 10 lines 10 and 11) of applicants' claims, it differs in that it does not specifically require trimerization catalysts. However, Colafati (column 2 line 63-column 3 line 2, as well as, the entire document) discloses trimerization catalysts to be well known catalysts in preparing rigid foams for purposes of forming rigidized trimer ring linkages in products formed. Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the trimerization catalyst of Colafati as a catalyst used in the preparations of WO-'289 for the purpose of imparting their rigidizing trimer ring linkage formation effect to products formed in order

Application/Control Number: 10/542,379 Page 5

Art Unit: 1796

to arrive at the products of applicants' claims with the expectation of success in the

absence of a showing of new or unexpected results.

The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. Neff et al. is cited for its disclosure of relevant foam forming

compositions in the related art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John

Cooney whose telephone number is 571-272-1070. The examiner can normally be reached on M-F from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be

reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-

8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval

(PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see

http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business

Center (EBC) at 866-217-9197 (toll-free).
